Merging Data from Files	Linking to Fields
Preparing Data Files Defining Fields Linking to Fields Masking Printing Forms with merged Data	 Once you have defined your fields, they are available for linking to text, barcode and zone objects. Linking to a field To create a link to a field: Create a text object on your form. From the Definition tab, type in some sample text for the object. To link part of the sample text to a field in your data, select the sample text to be replaced and click Link selection. To link the entire source of an object to a field, click Link all. Select the defined Field or click the New Field is button to create a new field definition.
