Creating Matrix Zones

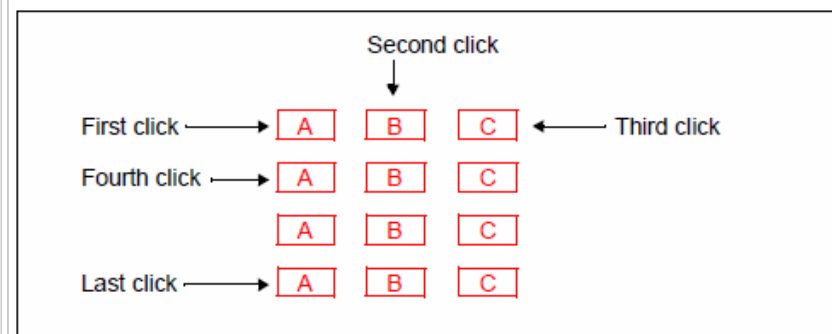

PDF version

You create a matrix zone with a series of mouse clicks. You define start point (1), then spacing between choices (2), number of choices (3), spacing and orientation between elements (4), and finally number of elements (5).

To create a matrix zone:

1. Click the Matrix Zone tool button  to change the pointer to a cross-hair.
2. Click a response position to place the *first choice* of the *first element* (the upper-left of the zone in the diagram).
3. Click the *second choice* of the *first element* to define the element's orientation (along columns or rows) and the spacing between choices.
4. Click the *last choice* of the *first element* to define the number of choices.
5. Click the *first choice* of the *second element* to define the spacing between elements.
6. Click the *last choice* of the *last element* to complete the zone.

"Short" zones

Zones can be as little as a single choice, use the same click pattern and press Mouse Right to finish:

3 choices, 2 repeats

- And press Mouse Right after Fourth click

2 choices, 2 repeats

- And press Mouse Right after Third click

2 choices

- And press Mouse Right after Second click
