[Examples](#)

Moving and resizing objects

You can easily move an object by selecting it with the mouse and dragging the object to a new location on the form.

When moving an object, you can **Nudge** it by using the keyboard arrow keys for finer control of its placement. See [Nudge Distance](#) for more information.

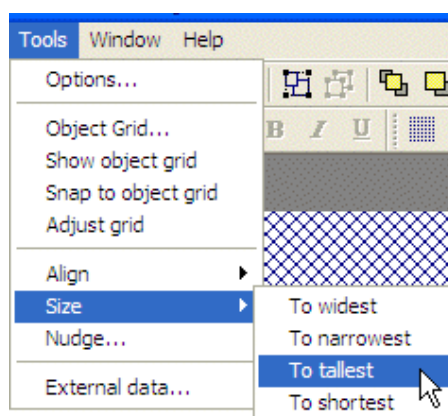

Resizing text

Text that appears within text or barcode objects can be resized using the **Increase Font**  and **Decrease Font**  tool buttons. The font of your object increases or decreases by one point each time you click one of these tool buttons.

[Top](#)

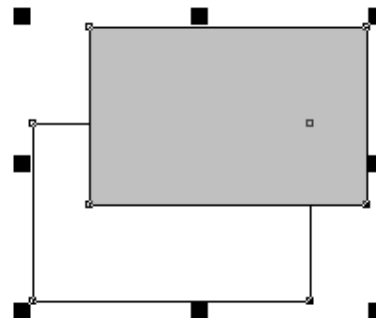

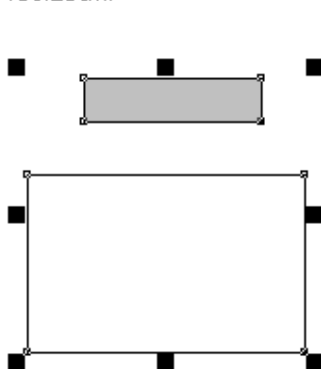

Multiple Object Sizing

You can resize objects by using the **Tools, Size** function, which adjusts the size of objects according to other objects in the selection. Size according to the window below.

For example, in the image below, the grey rectangle was resized to the same dimensions as the white rectangle.

Selected objects to be resized...

To tallest and To widest sizing options applied.

Moving angled lines

You can move the either handle of an angled line to change its length and angle. Two special keys can be used to control the angle. Pressing CTRL while moving the handle rounds to a 15 degree angle, while pressing SHIFT rounds to a 5 degree angle for finer adjustment.
