Changing Object Stacking

FoD-OMR offers many ways to arrange your form to enhance its appearance and usability.

Changing object stacking

When you create a new object, FoD-OMR places it on top (in front) of objects already on the page. Object order allows you to control how objects overlap on the same page by putting them in front of, or behind other objects.

There are four options available when modifying object's order:

- **Bring to front** - object brought to the top most layer

- **Front one** - object brought forward one layer

- **Back one** - object sent back one layer

- **Send to bottom** - object sent to the bottom most layer

To modify the object's order:

- Select the object you wish to move.
- From the **Edit** menu, select **Order** and then choose the appropriate option.
- Alternatively, right click on the selected object and choose the appropriate option from the **Order** menu.
