Creating a New Project

To create a new project:

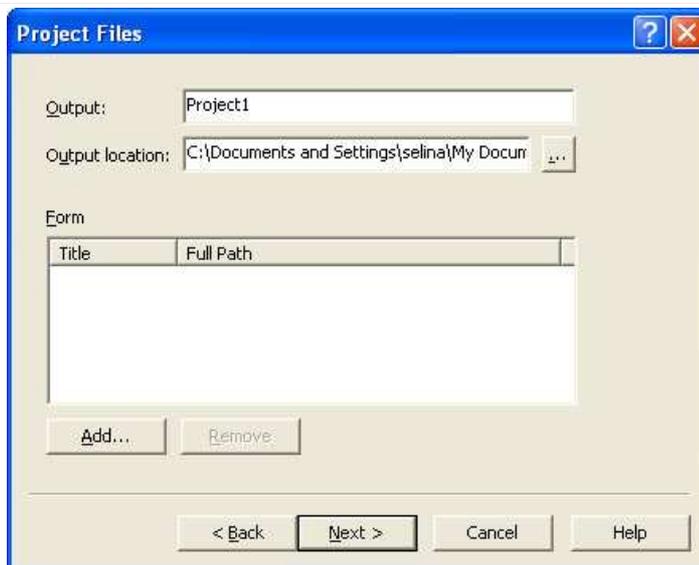

- Select **New Project** from the **File** menu. **Project Definition wizard** is launched.
- Enter an appropriate name in the **Project name** text box.

The **Project Definition** dialog box is shown. It has a title bar with a question mark and a close button. The main area contains two text boxes: "Project name:" with the text "Project1" and "Project location:" with the text "C:\Program Files\TCGIS\FTDesign\Forms". To the right of the "Project location:" text box is a browse button (three dots in a square). At the bottom of the dialog are four buttons: "< Back", "Next >", "Cancel", and "Help".

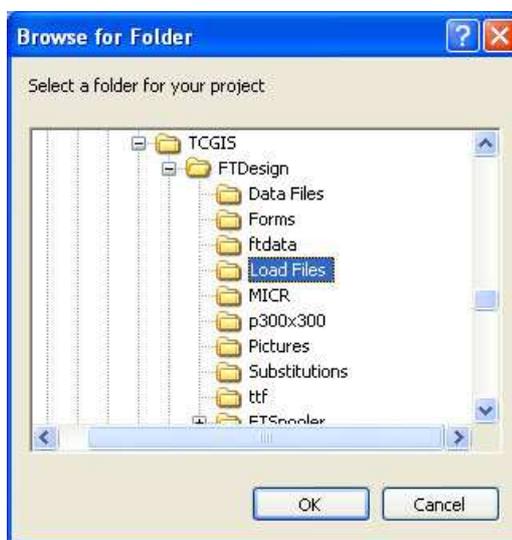

- Click the browse "..." button to locate the project. The default **project file location** is defined in **Design Options, Folders** tab.

The **Browse for Folder** dialog box is shown. It has a title bar with a question mark and a close button. The main area contains a tree view showing a folder structure. The root folder is "TCGIS", which contains a sub-folder "FTDesign". Under "FTDesign", there are several sub-folders: "Data Files", "Forms" (which is selected and highlighted in blue), "ftdata", "Load Files", "MICR", "p300x300", "Pictures", "Substitutions", "ttf", and "FTSpooler". At the bottom of the dialog are two buttons: "OK" and "Cancel".

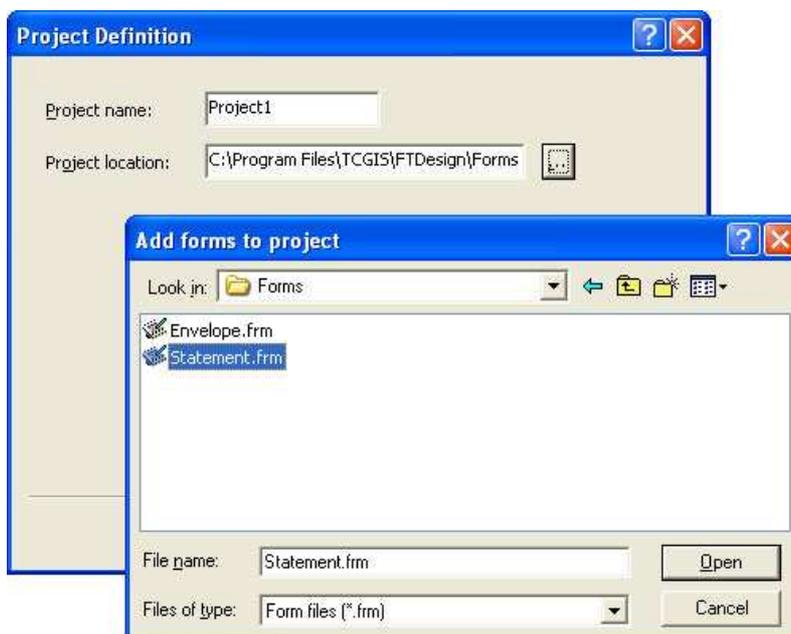

- Click the **Next** button to continue.
- Enter a name for the load (.asc) file in the **Output** text box. By default it carries the same name as your project.

- Click the browse "..." button to locate the load (.asc) files when they are created by the build process. The default **load files location** is defined in **Tools, Options, Folders** tab.

- To add one or more existing forms to the project:
 - Click the **Add** button and browse to the forms' location.
 - Select the form(s) you wish to add to the project. Select multiple forms by clicking each of them while holding down the CTRL key.
 - Click **Open**.

- If you have not designed any forms yet, you can skip this step and add them later.
- Click the **Next** button to continue.
- Configure the **Project Options**.
- Click **Finish** to complete the project definition.
