   ▷ Rules
   ▷ Properties
   ▷ Evaluation Order of Entries
   ▷ Evaluation Order of Areas
   ▷ Delete an Entry, Area or Rule
▣ Tools
▷ Running Repaginator from Command Line

New Entry

General processing for a new file is to identify these areas, in this order, per document:

- **Header** for the first page, including either a **Change rule** on the document number (eg. Invoice Number) or a rule selecting page 1 (and not page 10, 11 and so on).
- **Footer** (if a footer exists), including a rule to identify the footer proportion of the form.
- Unwanted **Detail** lines (**Properties**, **Suppress output**) for the following, all with rules:
  - Subsequent page headers (segregated by not having the change rule or page 1 rule applying).
  - Unwanted lines such as trailer, "continued" brought forwards and so on.
- **Detail** lines that are not blank to capture all of the remaining data except blank lines.

Your final file should have one page of output containing Header, Trailer and relevant detail lines as one long page.
