## Special Forms - CSV Output File

Comvita (NZ Medical Honey company) use a third party fulfillment system in Hong Kong to fill orders and required an automated way to get the data from their QAD picking/invoicing systems to the third party. After discussion with TCG we designed a form to pass the data to the third party computer fulfillment system using Separated Files produced from FormTrap.

You can output a CSV file using the Associated File command, like this:

	Define Draw Go Project Too	and the state of the state of the		11000 500	Leve too 7
PS I	PLATO\HP Color Las 👻 👗 🛍 I

Here we construct Associated File lines with all of the fields required, starting with the ; (semi-colon) separator (so this is strictly a semi-colon separated file). The same is done for the initial "Header" portion and for each of the Detail and Comment lines as well. The Red items are missing the initial #, hence print and are used for checking the output during testing. These are taken out for production (subsequent provision in FTDesign to look at the Associated File now makes the red lines redundant).

This is the output.

has no "trailer" so the Associated File records for Header and Trailer are duplicated

## Follow-up via Email from Customer, one month later:

2. The first character in the "detail" section must be the separator.

further down.

Headers on a CSV file, only 1 required. Hi Paul, How do I prevent the HEADER from repeating if there are more than 1 pages? We should only get the HEADER on top of page 1. Cheers Comvita From: paul [mailto:paul.green@formtrap.com] Hi Comvita, Use Print Rules to do this only for "Page: 1" (on both Header fields). \_\_\_\_\_ Hi Paul, Job done! That was so easy thank you very much. Cheers Comvita
