

Remove Pipes from Input - Infor Global LN - Questas as first customer

Used to remove embedded PIPE symbols in the input file for output from Infor's LN system for long records that they need to break up into printable "slabs".

Removes (entirely) pipe-after-end-of-line (looked for first), then within a line.

This effectively removes the "Line Feed + Pipe" used to segregate lines on long records, then looks for and removes the within-line Pipes. Sequence is all important.

Note that all data fields are consistent length.

```
[killpipes]
"\0d\0a|" "" all
"|"" "" all
```
