

## **Acom - insert end-of-form in a check file**

The file to be processed is designed for a matrix printer and prints lines rather than including a Form Feed.

This inserts a Form Feed at the double line ending each check page. This then forms pages which Version 7 FormTrap recognizes.

Replace a dual line feeds (hex 0d0a0d0a) with form-feed (hex 0d0c0a)

```
[acom-check]
```

```
"\0d\0a\0d\0a" "\0d\0c\0a" all
```
