

ICWI Cheque Run

This normalises the ICWI cheque input where the number of lines varies between cheques, and there are no form feeds in the cheque run (probably the cheque paper is full sized for two cheques only).

Looks for two line breaks, then the literal " UND1201" and replaces the two line breaks with a FormFeed.

This produces a consistent start of page, and it's all good thereafter.

```
[Normalise-UND1201]
```

```
"\0d\0a\0d\0a\20\20UND1201" "\0C\0d\0a\20\20UND1201" all
```
