

Make "Project" consistent - Thomas & Betts

This replaces various spelling of Project (eg Porject:) with the consistent ~~~project:

The file is set up for user replacement as new variations are invented by T&B staff with finger fumbles. The data after "Project" is required, this makes it recognisable.

We've set up for the four main variations of each different spelling:

Upper and Capitalised case eg PROJetc and Projetc
With following : or not

The list is added to each time someone at T&B invents a new way to mangle the spelling. This is a prime example of how NOT to construct a system.

[PROJECT]

"\0d\0a	PROJECT:"	"\0d\0a	~~~project:"	first
"\0d\0a	Project:"	"\0d\0a	~~~project:"	first
"\0d\0a	PROJECTS:"	"\0d\0a	~~~project:"	first
"\0d\0a	Projects:"	"\0d\0a	~~~project:"	first
"\0d\0a	PROJetc:"	"\0d\0a	~~~project:"	first
"\0d\0a	Projetc:"	"\0d\0a	~~~project:"	first

"\0d\0a	PROJetc "	"\0d\0a	~~~project:"	first
"\0d\0a	Projetc "	"\0d\0a	~~~project:"	first
"\0d\0a	PROJETCS "	"\0d\0a	~~~project:"	first
"\0d\0a	ProjetcS "	"\0d\0a	~~~project:"	first
"\0d\0a	PORJECT "	"\0d\0a	~~~project:"	first
"\0d\0a	Porject "	"\0d\0a	~~~project:"	first
"\0d\0a	PORJECTS "	"\0d\0a	~~~project:"	first
"\0d\0a	Porjects "	"\0d\0a	~~~project:"	first

Note: This is redundant in Version 8 as the same test can be done directly in the form XML extract using RegEx to identify the required data.
