FTSpooler Setup

E-mail

FTSpooler offers two e-mailing methods: Simple Mail Transfer Protocol (SMTP) and Microsoft® Outlook/Exchange (MAPI).

To configure the SMTP connection:

- Enter the full domain name of the SMTP server in the **Host** textbox.
- Choose a login type from the **Login** drop down menu.
- For login options other than *None*, enter the **User** and **Password** to be used by FTSpooler to log into the SMTP server when sending email.
- Choose an encoding type from the **Encoding** drop down menu.
- Enter a full email address in the **Default sender** textbox to define the sender details for outgoing email.
- Click the **Save** button.

To use Outlook/Exchange, the profile information must be available to FTSpooler. The profile name is mandatory, password is optional and required only if the profile is password-protected.

To configure Outlook/Exchange settings:

- Select the appropriate email profile from the **Logon Profile** list. No profile listed means there is no MAPI profile configured. Create and configure a profile on that machine before continuing.
- Enter the password for that profile.
- Click the **Save** button.

The screenshot shows the FTSpooler Setup application window with the 'Setup' tab selected. The left sidebar contains a tree view with categories: Core components, Data input, and Delivery. The 'E-mail' option under the Delivery category is selected. The main area displays the SMTP configuration fields:

- SMTP** section:
 - Host: mail
 - Login: None (dropdown)
 - User: (empty text box)
 - Password: (empty text box)
 - Encoding: None (dropdown)
 - Default sender: accounts@formtrap.com
- Outlook / Exchange** section:
 - Logon Profile: (empty dropdown)
 - Password: (empty text box)

At the bottom, a status message reads: "E-mail settings are modified, but not saved". Below this are two buttons: "Save" and "Restore".
